Bridge Day 10 STUDENT QUIZ

Cumulative Recap Before Repetition

Learning sequence: Predict - Trace - Explain - Test - Interpret

Friday, July 17, 2026 • 20 points • target 18 minutes

Name		UIN		Section	

Assessment boundary and evidence source

Contract: 07a04826c975
Cumulative foundations: input conversion, integer arithmetic, Boolean precedence, ordered decisions, f-strings
Scaffold level: independent cumulative decision program before while-loop instruction
Evidence source: the matching v5 workbook readiness/evidence pages and VIP activities 18.19, 18.21, 18.22.
Show intermediate state for trace credit. Program credit requires one coherent solution, a stated assumption when the prompt leaves one implicit, and at least one test whose expected result can distinguish correct from incorrect logic.

Item 1. Trace arithmetic and Boolean precedence. - 4 points

```
x = 17
y = 5
result = (x // y) ** 2 + x % y
ok = result >= 11 and not (x % 2 == 0)
print(result, ok)
```

Question: Show quotient, remainder, exponentiation, and both Boolean components before giving exact output.

Item 2. Trace an ordered decision with a missing-work condition. - 4 points

```
score = 88
missing = True

if score >= 85 and not missing:
    message = "distinction"
elif score >= 70 or not missing:
    message = "pass"
else:
    message = "incomplete"

print(message)
```

Question: Name the first matching branch and explain why the higher label is not selected.

Item 3. Repair a type mismatch before comparison. - 4 points

```
raw = "12"
limit = 10
print(raw >= limit)
```

Question: Name the actual error, explain its cause, and write a corrected comparison that evaluates numerically.

Complete program - 8 points

- Read temperature as a float and calibrated as text, where exactly yes means calibrated.
- Print invalid when temperature is below -20 or above 60.
- Otherwise print ready only when calibrated is yes and temperature is from 15 through 35 inclusive; print hold for every other valid case.
- Use one if/elif/else chain and print exactly one word.

Program workspace

Test input, expected result, and why this test matters

Quiz evidence is sampled from the taught construct boundary; workbook and notebook evidence remain the primary learning surfaces.
