

Day 20 Evidence Workbooklet

Python Seminar Closeout and Readiness Reflection

No new Python content: readiness evidence, next steps, and closeout reflection

Student copy. Guided workbooklet, not the mastery quiz. Print format: duplex, left-stapled packet.

Name		Section		Date	
Score	____/58		Mastery check	secure / developing / needs support	

Concrete engineering situation

Day 20 closes the bridge. Students collect evidence of growth, name remaining support needs, and write a concrete readiness plan for ENGR 102.

Engineering task	Close the bridge with an evidence-based readiness plan rather than a vague confidence statement.
Computational move	Summarize the evidence routines that will transfer into future programming work.
Python focus	Review only: output/state, conditionals, loops, lists, debugging, tests, explanation, support route.
Evidence to keep	growth evidence, remaining support route, artifact checklist, study routine, readiness statement, transition commitment.

Day 20 working rules

1. No new Python content today.
2. Use evidence from actual bridge work.
3. Name both strengths and support needs.
4. Make next steps concrete.
5. Close with a realistic readiness statement.

Evidence map

Manage your evidence

blueprint

Part	Section	Evidence focus
1	Evidence of growth	growth, evidence
2	Remaining support route	support, next
3	Artifact checklist	portfolio, checklist
4	ENGR 102 study loop	study, routine
5	Readiness statement	reflection, readiness
6	Closeout commitment	commitment, closeout

1 Evidence of growth

growth

evidence

Name concrete evidence, not only feelings.

Pts.	Prompt	My evidence / response
2	One Week 1/2 skill I can now explain.	
2	One loop/list skill I can now trace.	
2	One debugging routine I can now use.	
2	One test-design habit I improved.	
2	One artifact or page that shows this growth.	

2 Remaining support route

[support](#) [next](#)

Readiness includes knowing what still needs support.

Pts.	Prompt	My evidence / response
2	My highest-priority remaining support need.	
2	What evidence shows that need.	
2	The support routine I will use first.	
2	Who or what I will consult.	
2	How I will know the support worked.	

3 Artifact checklist

[portfolio](#)[checklist](#)

Make sure the bridge evidence is organized enough to reuse.

Pts.	Prompt	My evidence / response
2	Workbook/evidence packet I should keep.	
2	Quiz/exam feedback I should review.	
2	Code or pseudocode example I should revisit.	
2	Debug/test example I should preserve.	
2	Where I will store these materials.	

4 ENGR 102 study loop

study routine

Turn the bridge into a weekly routine.

Pts.	Prompt	My evidence / response
2	Before class or lab, I will...	
2	During problem solving, I will...	
2	After feedback, I will...	
2	Before exams, I will...	
2	When stuck, I will...	

5 Readiness statement

reflection readiness

Write a balanced statement: ready for what, with what support.

Pts.	Prompt	My evidence / response
4	I am ready to begin ENGR 102 programming work because...	
2	I still need support with...	
2	My first action if I get stuck will be...	
2	The evidence routine I trust most is...	

6 Closeout commitment

commitment

closeout

End with one concrete commitment that can be checked later.

Pts.	Prompt	My evidence / response
4	My ENGR 102 programming commitment for the first two weeks is...	
2	How I will check whether I kept it.	
2	What I want my future self to remember from this bridge.	

Support route

This is the end of the Python seminar content sequence. Future course work should build from these evidence routines.
